

Production optimised technology for the hollowcore industry

Description

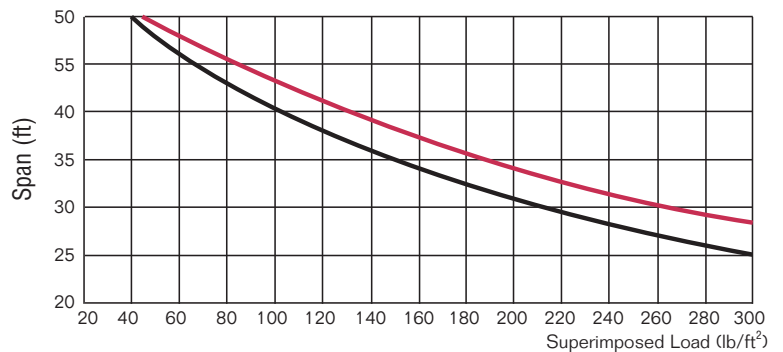

This standard Dynacore 10 serves industry demand for a structurally efficient 10" section that is easy and cost effective to extrude. Produced by our high frequency dynamic compaction extruder technology, the Dynacore 10 is dense and of superior quality.

Additionally, Dynacore Equipment can design and manufacture a custom 10" section to suit the client's needs.

Section Properties

Weight	$w = 67 \text{ lb/ft}^2$
Cross-sectional Area	$A = 256.5 \text{ in}^2$
Moment of Inertia	$I = 3145 \text{ in}^4$
Centroid Height	$y_b = 4.9 \text{ in}$
Shear Width	$b_w = 13 \text{ in}$

Load/span table

Load/span tables shown are for information only. Actual load/span capabilities will depend on local codes, standards and materials.

— 2" Composite Topping
— Untopped
